Long Answer-type question.

1 What are the functions of sepals and petals?

Ans:- Sepals - sepals help to protect the bud before it opens.

Petals - petals attract butterflies and bees because these are brightly coloured parts of the flowers.

2 What is pollination?

Ans:- The process of taking pollen from one flower to another is called pollination.

3 Why is dispersal of seeds necessary?

Ans Some times many seeds can't grow well because they don't get proper sunlight, water and air so ~~the~~ dispersal of seeds is necessary for proper germination.
